

1. The most spectacular achievement of this month is the **crawling** (!). Nataalka can crawl in the desired direction, even across the room.

Finally, she is able to approach the subject of her interest.

She p

rops up higher and higher on her hands.

H

er back gets stiffer slowly, which you can feel when you hold her.

2. With the crawling there are more and more **sounds** from our child's mouth!

3. Nataalka has turned on 2 naps during the day, which has increased her daily activity.

4. We had a visit to the clinic of nutrition, where Natalia was measured and weighed precisely. All parameters and indicators are in the standard, we have received further dietary guidelines.

5. Control visit in eye (ophthalmology) clinic - the eyes are in order.
